

# FORMaT

Finding the Optimal Regimen for *Mycobacterium abscessus* Treatment

## Have your say!

We are looking for people to be part of our Consumer Advisory Group to provide their say on how treatments for a rare lung condition are being tested

The FORMaT study is designed to find out what the most effective and well tolerated treatments are for a rare condition called *Mycobacterium abscessus* (MABS) lung disease. We are looking for people to provide a consumer and community perspective on study documents, how the study is carried out and future study plans. We want to involve people who have current or past diagnosis of MABS lung infection, parents or carers of people with MABS lung function, people with existing lung conditions of bronchiectasis or cystic fibrosis or any members of advocacy or support groups focusing on MABS lung infection or cystic fibrosis. Members will be remunerated for their time and efforts.
